ASX ANNOUNCEMENT (ASX: BRU) 28 June 2012

Weekly Drilling Progress Report - Yulleroo-3

Buru Energy Limited (“**Buru**” or “**Company**”) provides the following weekly update on the drilling operations at the Yulleroo-3 well as at 06:00hrs, 28 June 2012 (AWST).

Yulleroo-3 is the third well in the Buru – Mitsubishi Corporation (“**MC**”) 2012 Joint Exploration Program. The well is located in exploration permit EP 391 some 80 kilometres to the east of Broome. Buru and MC each have a 50% interest in this well and in EP 391, with MC contributing 80% of the cost of the well under the terms of its farm-in agreement with Buru.

Since the last progress report, the well has been drilled ahead in 8½ inch hole to a measured depth of 3,200 metres. As at 06:00hrs, the operation was drilling ahead at 3,200 metres measured depth.

The top of the Upper Laurel Clastics is interpreted to have been intersected at 2,341 metres measured depth. Significant gas shows have been noted in the well from approximately 2,130 metres measured depth, with a number of gas peaks of 3 to 30 times background. The top of the gas shows has been encountered at shallower depths than in the previous Yulleroo wells, and the shows have some similar characteristics to the shows seen in the Valhalla wells. The equivalent sands to the main gas sands in the Yulleroo-1 and 2 wells are expected to be encountered shortly and a 54 metre conventional core will be cut at the appropriate point in these sands for detailed rock property evaluation.

The significance of the shows encountered to date and their relationship to the previous wells will be determined once drilling and logging has been completed.

In accordance with its policy of releasing weekly drilling progress reports, the Company expects to issue a further drilling progress report on 5 July 2012, subject to any material events occurring in the meantime.

Further information on the Company is available at: www.buruenergy.com

YULLEROO-3

PERMIT	The Yulleroo-3 well is located in exploration permit EP 391 some 80 kms east of Broome. Maps showing the location of the well are set out on the following page.
WELL LOCATION	Latitude: 17° 50' 59.39" S Easting: 488510m Longitude: 122° 53' 20.59" E Northing: 8026425m
BURU'S INTEREST	Buru Energy Limited holds a 50% interest in the well
DATE OF PROGRESS REPORT	06:00hrs, 28 June 2012 (AWST)
PROPOSED TOTAL DEPTH	3,600 metres
CURRENT DEPTH	3,200 metres
PROGNOSED TIME TO COMPLETION	58 days
SPUD DATE	25 May 2012
DAYS SINCE SPUD	34 days
CURRENT TARGET FORMATION	The Yulleroo-3 well is targeting the Upper and Lower Laurel gas sands encountered in the Yulleroo-1 and 2 wells.
OPERATIONS SINCE LAST PROGRESS REPORT	Since the last progress report, the well has been drilled ahead in 8½" hole to a measured depth of 3,200 metres.
HYDROCARBON INDICATIONS	<p>The top of the Upper Laurel Clastics is interpreted to have been intersected at 2,341 metres measured depth. Significant gas shows have been noted in the well from approximately 2,130 metres measured depth, with a number of gas peaks of 3 to 30 times background. The top of the gas shows has been encountered at shallower depths than in the previous Yulleroo wells, and the shows have some similar characteristics to the shows seen in the Valhalla wells. The equivalent sands to the main gas sands in the Yulleroo-1 and 2 wells are expected to be encountered shortly and a 54 metre conventional core will be cut at the appropriate point in these sands for detailed rock property evaluation.</p> <p>The significance of the shows encountered to date and their relationship to the previous wells will be determined once drilling and logging has been completed.</p>
FORWARD OPERATIONS	Drill ahead to core point. Cut 54 metre conventional core.
